- Relays and Contactors: Switch high-current loads based on control signals
- Capacitors: Assist in starting and running motors
- Compressors: The core component for cooling
- Fans: Indoor and outdoor fans for airflow circulation
- Sensors: Safety devices like overloads or pressure switches

Flow of Electrical Current

Trace the power flow from the supply to various components:

- Power enters through the main breaker or fuse.
- Power is routed to the contactor coil, which, when energized, closes contacts to supply power to the compressor and fans.
- The control board receives signals from the thermostat and sensors to energize or de-energize relays.
- Capacitors provide the necessary phase shift for motor start-up.
