 - Multiply cost by markup decimal to find the markup amount.
 - Add markup to cost to determine the selling price.
- Markdown: To find the sale price after a markdown:
 - Convert markdown percentage to decimal.
 - Multiply original price by markdown decimal to find the markdown amount.
 - Subtract markdown from original price.

2. Computing Discounts and Sale Prices

- Single Discount:

- Convert discount percentage to decimal.
- Multiply original price by discount decimal.
- Subtract discount amount from original price.

- Multiple Discounts:

- Apply the first discount to the original price.
- Use the resulting price as the new base for the second discount.
- Continue as needed.

3. Interest Calculations

- Simple Interest:

- Use the formula: $I = P \times r \times t$
- P = principal amount
- r = annual interest rate (decimal)
- t = time in years

- Compound Interest:

- Use the formula: $A = P(1 + r/n)^{nt}$
- n = number of compounding periods per year
- A = amount after interest

4. Loan Amortization

- To determine periodic payments:

- Use amortization formulas or calculator functions.

- Input principal, interest rate, and payment periods.
- Calculate consistent payment amounts covering interest and principal.

5. Business Ratios Calculation

- Profit Margin:
- Profit Margin = $(\text{Net Profit} / \text{Sales}) \times 100\%$
- Return on Investment (ROI):
- ROI = $(\text{Net Profit} / \text{Investment}) \times 100\%$
