Louis Daguerre improved the process with the invention of the daguerreotype in 1839, which produced clearer images on polished metal plates and is considered the birth of practical photography. Around the same time, William Henry Fox Talbot developed the calotype process, enabling multiple copies from a single negative.

Evolution Through the 19th and 20th Century

The 19th century saw rapid advancements:

- Wet plate collodion process (1850s): Producing sharper images, used extensively in portraiture.
- Dry plates (1870s): Easier to handle and store, leading to more widespread use.
- Color photography: First experimented with in the late 19th century, with the Autochrome process introduced in 1907, allowing color images to be produced.

The 20th century marked the rise of film photography, with iconic cameras like Leica's 35mm and Kodak's Brownie making photography accessible to the masses. The development of Polaroid instant cameras in the 1940s further revolutionized the way people captured and shared images.
